

Emergency Response

A HENKELS & MCCOY Group Company

A hurricane in 1938 established our emergency response credentials. A Category Three tropical hurricane blasted Long Island and much of New England on September 21, wreaking havoc and taking 680 lives. We mobilized 400 men and trucks and began emergency tree clearance and telephone and power restoration work. This ability to respond quickly in adverse circumstances firmly established Henkels & McCoy as a key player in power restoration and utility infrastructure construction.

Our long history is replete with specific examples of prompt, effective action in the face of the most challenging disasters. Years of experience have taught us, as only experience can, that when it comes to emergency response, one thing is clear: there is a significant difference between reacting and responding. Reactors operate in the moment. Responders perform through organization, communication, and lessons learned.

Henkels & McCoy responds.

PERFORMANCE has built our business...[®]
